

BP Labs Technical Support Documentation

Note: This version has been redacted. All credentials, account passwords, API keys, direct links, sheet/document identifiers, phone numbers, email addresses, and screenshots have been removed or replaced with generic placeholders.

Summary of Manual Tasks Done Each Month

1. 1st of the month — Under the "Staff Info" tab, filter the "Duty Roster Code" column to "NO" (avoid staff marked in grey). Open the WhatsApp availability request sender workflow, update the Month and Period dates under "Generate WhatsApp Message," and publish it.
2. 1st of the month — In the WhatsApp response handler workflow, in the "Parse WhatsApp Response" node, change the Month and Month_Name fields to match the month being recorded.
3. 1st of the month — In the roster compilation workflow, in the "Calculate Target Month" node, update the target_month value to match the month being recorded.
4. 22nd of the current month — Share the finalized roster spreadsheet for the current month with the designated HR/InfoTech point of contact, in the agreed format.

Overall Workflow of AI Rostering

- WhatsApp AI sends a shift preference request (1st of every month, for the following month).
- Staff submits their preference via WhatsApp.
- Preference is parsed and recorded in the tracking spreadsheet.
- Draft roster is auto-generated.
- Email notification is sent to the respective branch that the draft roster is ready.
- Branch Manager logs into the dashboard (branch-specific access).
- Branch Manager reviews the draft roster and makes changes if required, then finalizes it.
- Staff sends a shift change request via WhatsApp.
- System parses and records the request.
- Email notification is sent to the branch.
- Branch Manager logs into the dashboard and approves or rejects the request.
- If approved, changes are updated in the Final Roster only (the draft roster remains unchanged).
- If rejected, no changes are made and the staff member can be notified.
- Daily clock-in / clock-out data is pulled from the attendance system.
- Data is recorded in the system.
- A daily reconciliation process runs.
- If there is a mismatch between the roster and actual attendance, it is flagged as an exception.

n8n Workflow and Spreadsheet Walkthrough

1. WhatsApp Availability Request Sender

Trigger: scheduled daily check, configured to run once per month on the appropriate date.

Only processes staff records where the "Duty Roster Code" column equals "NO."

The "Generate WhatsApp Message" step sets the Period to the upcoming month for which preferences are being requested, and sets the submission deadline to the 21st of the current month.

2. WhatsApp Response Handler

Change the Month and Month_Name values in the "Parse WhatsApp Response" node to match the month being recorded.

Preferences are recorded in the availability responses tracking tab. The "Notes" column stores the raw text of the staff member's WhatsApp reply.

New entries are marked with "Roster_Processed" and "Manager_Email_Sent" both set to "NO."

3. Roster Compilation

The "Calculate Target Month" node sets the target month for compilation; this needs to be advanced each month.

The workflow checks for records where "Roster_Processed" is "NO."

After the draft roster is created and recorded, an email is sent to the respective branch. Branch is identified from the "Outlet Name" column associated with each staff record.

4. Roster Finalization Handler

Handles the Branch Manager's finalization of the draft roster from the dashboard; a notification is sent to the branch's designated email address once finalized.

5. Final Roster and Shift-Change Request Workflow

Handles two flows: (a) requests for the final roster of a given month, and (b) delivering an updated roster after a shift-change request has been approved.

Final roster request: staff sends the target month via WhatsApp; if a roster exists for that month, it is sent back. Otherwise, a "not available" message is sent.

Updated roster request: the system first checks the exceptions log for any pending shift-change request for that staff member in the requested month.

If a request is pending, a "not ready" message is sent instead.

If no request is pending, the system retrieves the current roster for that month and sends it.

The cutoff for submitting a shift-change request is the 19th of each month.

Note on due-date policy: outlet managers agreed on the following schedule structure, using April as an example:

- Staff submit shift preferences by the 21st of the prior month.
- Staff may request shift changes until the 19th of the target month.
- The Branch Manager finalizes the roster and approves/rejects shift-change requests via the dashboard until the 21st (existing practice).
- Given the payroll cutoff period, the final few days of the month should not be locked for amendments, since onsite arrangements or management-assigned tasks can arise suddenly and affect working hours.
- For sudden changes affecting working hours near the end of the cycle, HR is responsible for making amendments once the monthly schedule is locked, or the lock can be skipped entirely if not needed.

6. WhatsApp Confirmation / Shift-Change Response Handler

Handles shift-change requests submitted by staff.

Checks that the shift-change request follows the correct format.

- If the format is correct, the system checks whether the requested date is before the 19th of the current month.
- If before the cutoff: the request is recorded and a confirmation text is sent to the staff member.
- If after the cutoff: the request is rejected.
- If the format is incorrect: a message is sent to the staff member indicating the wrong format was used.

7. Gmail Approval Request Workflow

Periodically checks whether there are any pending shift-change requests. If so, an approval-request email is sent to the respective branch.

8. Exception Response Handler

After a branch receives the approval-request email and approves or rejects a shift-change request, this workflow records the outcome and informs the staff member.

If approved, a confirmation text is sent to staff, who can then request the updated roster (see the workflow described in Section 5).

9. Attendance System Daily Sync (Clock-in / Clock-out Data)

A set of scheduled sync workflows pull daily clock-in and clock-out data for all company IDs into the tracking spreadsheet's attendance tab.

10. Reconciliation Workflow

Scheduled to run daily in the late evening.

Compares recorded attendance data against the roster and flags any of the following as exceptions, notifying the relevant branch by email: missing attendance, early or late clock-in, and early or late clock-out.

Attendance / Approval Notes

If a staff member's clock-in or clock-out is not reflected on the system, it is typically because that record is in a "pending" state on the attendance-system side and requires approval by the Branch Manager before it will sync.

For attendance-system access issues or sync questions, contact the designated InfoTech support contact (see internal contact list; not included in this document).

Dashboard and Reporting

A web-based dashboard is used by Branch Managers to review and finalize rosters, and to approve or reject shift-change requests. It provides three main views:

- Roster Management — reflects the current draft roster for the selected month, shown as a calendar.
- Final Roster — reflects the finalized/latest roster, with total shift counts and status.
- Shift Change Request — reflects pending, approved, and rejected shift-change requests, filterable by branch, type, and date range.

Login credentials for the dashboard, the automation platform account, and the tracking spreadsheets are managed separately and are not included in this document. Please contact your system administrator for access.

Staff Master Data

A master tracking spreadsheet contains all staff data used by the rostering workflows. Staff rows marked in grey have either resigned, been terminated, or are otherwise not required for roster shifts (kept up to date based on Branch Manager input); AI shift-preference requests should not be sent to these staff.

Individual branch-level staff lists (covering 50+ branches) are also maintained separately for reference. Access details for these are managed outside this document.

Redaction Notice

The following categories of information have been intentionally removed from this document to protect sensitive data: login credentials and passwords, API keys, direct spreadsheet/document links and identifiers, phone numbers, email addresses, and embedded screenshots. Please refer to the secure internal credentials store for any of the above.
