

Project Walkthrough & QA — GarboGuard

Document version: 1.0 **Date:** 2024-03-05 **Type:** Front-end marketing website (multi-page) **Stack:** HTML5 · CSS3 · JavaScript · Responsive layout **Author:** Tasnim Mahdiya (design and full implementation)

1. Overview

GarboGuard is a marketing website for a smart waste-management company whose product line is IoT-enabled waste bins built for environmental sustainability. The site presents the company's offering across five hand-coded pages. Per the project note, the homepage layout drew inspiration from established professional sites, but all markup, styling, and behaviour were written from scratch.

This document walks through each page and records the QA pass across layout, navigation, and responsive behaviour.

2. Page Inventory

Page	File	Purpose
Home	<code>try.html</code>	Hero "Cleanliness for Healthy Environment", value props, reasons to choose
About	<code>about.html</code>	Company background and mission
Products	<code>product.html</code>	The IoT hardware line-up
Services	<code>services.html</code>	Service offerings and monitoring
Contact	<code>modified_contact.html</code>	Contact form and company details

3. Product & Service Content (as built)

Products page presents the smart-bin technology stack:

- **Solar System** — self-powering bins via solar panels
- **Smart Lock System** — controlled access to bin contents
- **LCD Display** — on-bin status and fill-level readout
- **Blynk Interface** — IoT dashboard/app connectivity

Services page presents:

- **Smart Waste Bin** — the core IoT bin product
- **Real-time Data Monitoring** — fill-level and collection telemetry

Home page value section ("Your Reason to Choose Us"): Customer Focused · Trust and Respect · Reasonable Price.

4. QA — Layout & Navigation

Case	Checked	Result
Cross-page nav	Every page's nav links to all others	✓ Pass
Home hero	Banner image + headline render, CTA visible	✓ Pass
Products grid	Four product blocks render with headings + copy	✓ Pass
Services blocks	Two service sections render with styled headers	✓ Pass
Contact form	Name/email/message fields present and focusable	✓ Pass
Asset loading	Banner, product, and icon images resolve from <code>img/</code>	✓ Pass

5. QA — Responsive Behaviour

Layout was checked across breakpoints in the browser device toolbar.

Breakpoint	Width	Result
Mobile	375px	Nav collapses, sections stack vertically
Tablet	768px	Two-column sections reflow cleanly
Desktop	1280px	Full multi-column marketing layout

6. Summary

Area	Cases	Pass	Fail
Layout & navigation	6	6	0
Responsive	3	3	0
Total	9	9	0

All pages render and interlink correctly, product and service content displays as authored, and the marketing layout holds from mobile to desktop. The site is a complete, self-

contained static front end demonstrating hand-written HTML/CSS/JS and responsive design.
