

# Proposed Agentic AI Rostering Workflow

Pantai Hospital — Pilot Project

## Pilot Scope

- ENT Department: 5 doctors (pattern-based rotation)
- Physicians Department: 17 doctors (request-based)

## Current Manual Process

**ENT:** Rotation continues from previous month. Dr. Jenny only does one call/month (Monday–Thursday, first week). Other doctors rotate Monday–Thursday (one day each), weekends rotated among 4 doctors.

**Physicians:** On the 17th of each month, email/WhatsApp sent to collect requests. Doctors request 1–3 calls. Requests logged in physical logbook. First-come-first-served priority.

**Shift Swap:** Doctor A calls Doctor B → both agree → Doctor A fills form → form sent to Doctor B for signature → sent to CEO office → approved form comes to MQ staff for update.

## Proposed AI Workflow

### Schedule Requests (via AI WhatsApp)

1. Doctors text the AI WhatsApp number to confirm their on-call days
2. AI logs the information into Excel sheet (replaces physical logbook)
3. AI checks coverage to ensure no clashes with other doctors

### Shift Swap Process

| Step | Action                                                                                          |
|------|-------------------------------------------------------------------------------------------------|
| 1    | Doctor A speaks to Doctor B verbally (unchanged)                                                |
| 2    | Doctor A texts AI: "I want to swap my shift with Dr. B"                                         |
| 3    | AI sends message to Doctor B: "Dr. A has put in a request to swap with you. Are you agreeable?" |
| 4    | Doctor B confirms via WhatsApp                                                                  |
| 5    | AI escalates to CEO/approver for approval                                                       |
| 6    | Approver replies "Approved"                                                                     |
| 7    | AI updates Excel roster and notifies both doctors of schedule change                            |

### Daily Updates

AI sends daily update showing who is on call for the next day (all disciplines in one table) plus who is on leave. Sent to: all doctors.

## Information Required for Pilot

- 2–3 months of previous roster schedules (ENT + Physicians)
- WhatsApp numbers of participating doctors
- Designated approver for shift swap approvals (for pilot, can be anyone with authority, not necessarily CEO)

---

**Note:** No API or system integration required. Only WhatsApp numbers and a new Excel sheet for logging.
